

## Rooster Tail Performance Parts - 990 FM

**WARNING:** Wear gloves and clear safety glasses, and only work in a well-ventilated area when working with highly flammable, and toxic substance like gasoline/petrol. This is to ensure your safety, and that of others. Gasoline/petrol must be kept well clear of naked flames and potential ignition sources (eg. sparks, hot metal).

Every aspect of this carburettor has been enhanced, so ensure the following directions are followed.

Due to the extra fuel flow required, it is recommended you install a RTE Super Flow Fuel Line Kit.

Always depressurise your fuel tank before removing fuel lines from the carburettor.

Care must be taken when tightening the throttle shaft linkage mounting screw, as damage to the throttle shaft and the engine can occur if over tightened.

Carburettor Mounting Bolt Torque: 26in/lbs

The mixture settings are pre-set for a safe start and run on a **TAYLOR RC** big bore engine. If using this carburettor on a smaller engine, set the needles to the following:

Low: 1 & 1/8<sup>th</sup>      High: 1 & 5/8<sup>th</sup>

Your actual tune will depend on many factors e.g., height above sea level, type of fuel, temperature, engine modifications, pipe etc.
